

KGRN CHARTERED ACCOUNTANTS

AML / KYC Automation

User Manual & Operating Instructions

Role-based guide for Salespersons, AML Officers, AML Managers, Administrators and Clients

Document Reference	KGRN-AML-MAN-01	Version	v18.0.1.0.5
System / Module	Odoo 18 - aml_automation_extended_rk	Issue Date	27 August 2026
Applies To	KGRN Chartered Accountants LLC	Classification	Internal - Confidential
Prepared By	Compliance / IT	Next Review	Annually, or on any change to the AML workflow

Regulatory context. This system supports KGRN Chartered Accountants LLC's obligations under the UAE AML/CFT framework (Federal Decree-Law No. 20 of 2018 and Cabinet Decision No. 10 of 2019) for customer due diligence, beneficial-ownership identification, PEP and sanctions screening, and record keeping. It records the workflow; it does not replace the professional judgement of the Compliance Officer.

Document control

Version	Date	Prepared by	Approved by	Summary
v18.0.1.0.5	27 August 2026			Initial issue

How to use this manual

The manual is organised **by access level**. Read Sections 1 and 2 for context, then go straight to the section for your own role. Every action described in a role section is one that role is actually permitted to perform – if a button is not in your section, it will not appear on your screen.

If you are...	Your Odoo access	Read these sections
SALES Salesperson / Engagement owner	Sales access only. No AML group.	1, 2, 3 , 8, 11, 12
OFFICER AML Officer	Group <code>AML User</code>	1, 2, 4 , 8, 9, 10, 11, 12
MANAGER AML Manager / Compliance Officer	Group <code>AML Manager</code> (includes all AML User rights)	All sections
ADMIN System Administrator	Group <code>Settings</code> (<code>base.group_system</code>)	1, 2, 6 , 9, 11
CLIENT Client / external contact	No login. Secure emailed link only.	7 , 10

Contents

9	Automated notifications and scheduled reports	AML, Admin
10	Document checklists	AML, Client
11	Troubleshooting	Everyone
12	Glossary and sign-off	Everyone

1. System overview and end-to-end process

What the module does. When a sale order is approved, the system creates an AML request, emails the client a secure KYC web form (no login required), collects the completed form and supporting documents, routes it through AML Manager review and AML Officer investigation, and blocks project creation until AML/KYC is completed. Every action is recorded in the record's chatter for audit.

1.1 The eleven-step process

#	Stage	What happens	Responsible
1	Quotation	Salesperson sets KYC Type (Entity or Individual) on the sale order. The field is mandatory – the order cannot be saved without it.	Salesperson
2	Order approval	Sale order is approved. The system creates a Draft AML request, generates a unique secure token, pre-loads the document checklist for the KYC type, and emails the form link to the client.	System (automatic)
3	Client completes form	Client fills the 7-step web form and signs it. The AML reference (AML000001 ...) is assigned on submission, the status becomes New Request , and a 24-hour deadline is set automatically.	Client
4	Manager triage	AML Manager opens <i>AML > New AML Requests</i> and chooses Accept , Bypass or Cancel .	AML Manager
5	Assignment	AML Manager sets the AML Officer on the request. The officer receives an assignment email and the record appears in their pipeline.	AML Manager
6	Investigation	Officer clicks Start Investigation ; the exact start date/time is stamped on the record. Screening is performed outside Odoo (sanctions / PEP / adverse media) and the outcome recorded here.	AML Officer
7	Screening outcome	Officer clicks No HIT (clean) or HIT Detected (potential match).	AML Officer
8	Additional documents	If a HIT is detected – or at any point during the investigation – the officer lists the extra documents needed. The client receives a second secure upload link.	AML Officer → Client
9	Client responds	Client uploads the requested documents; status becomes Additional Info Received and AML Managers plus the assigned officer are notified.	Client
10	Decision	Approve or Reject . Management, AML Managers and the salesperson are notified as applicable.	AML Manager / Officer
11	Engagement proceeds	Once the request is Approved or Bypassed , the sale order shows AML/KYC Completed and a project can be created for the engagement.	Salesperson

1.2 Status flow at a glance

From	Action	To	Who
–	Sale order approved	Draft	System
Draft	Client submits KYC form	New Request	Client
New Request	Accept	Accepted	AML Manager
New Request	Bypass (no AML required)	Bypassed (closed)	AML Manager
New Request	Cancel	Cancelled (closed)	AML Manager
Accepted	Start Investigation	In Progress	AML Officer
In Progress	No HIT	No HIT	AML Officer
In Progress	HIT Detected	HIT Detected	AML Officer
HIT Detected	Client uploads additional documents	Additional Info Received	Client
Additional Info Received	Approve	Approved (closed)	AML Manager / Officer
Additional Info Received	Reject	Rejected (closed)	AML Manager / Officer
No HIT	Approve	Approved (closed)	AML Manager / Officer
Any open status	Sale order cancelled	Cancelled (closed)	System

The AML gate. A project cannot be created for an engagement until the latest AML request on that sale order is **Approved** or **Bypassed**. Only a System Administrator can override this, and only with a written reason that is stored on the order (see Section 6).

2. Access rights matrix - who can do what

Access is controlled by two Odoo groups under *Settings > Users & Companies > Users > AML Automation* **AML User** and **AML Manager**. AML Manager *includes* every AML User right, so a manager never needs both. Users with neither group do not see the AML application at all.

2.1 Menu visibility

Menu	No AML group	AML User	AML Manager	Shows
AML (application)	Hidden	Yes	Yes	-
AML > New AML Requests	Hidden	Hidden	Yes	Requests awaiting triage (status = New Request)
AML > AML Pipeline	Hidden	Yes	Yes	Kanban of all non-draft requests
AML > All Records	Hidden	Hidden	Yes	Every AML request including drafts
AML > User Manual	Hidden	Yes	Yes	On-screen reference guide

Record-level rule - read this carefully. An **AML User** can only see the requests where they are named as the **AML Officer**. The AML Pipeline is therefore *your* pipeline, not the team's. An **AML Manager** sees every request regardless of assignment. A newly accepted request is invisible to officers until a manager assigns it.

2.2 Data permissions

Record	AML User	AML Manager
AML Request	Read + edit own assigned only. No create, no delete.	Read, edit, create and delete all .
Directors / Shareholders lines	Read, edit, add. No delete.	Read, edit, add, delete.
Preliminary Information documents	Read, edit, add. No delete.	Read, edit, add, delete.
HIT document requests	Read, edit, add. No delete.	Read, edit, add, delete.
Additional-documents wizards	Full use.	Full use.

2.3 Button and field permissions

Action	Available in status	Sales	Officer	Manager	Admin
Set KYC Type on sale order	Quotation (mandatory)	Yes	Yes	Yes	Yes
Resend KYC Form Email	Draft, New Request	-	-	Yes	-
Accept	New Request	-	-	Yes	-
Bypass (No AML Required)	New Request	-	-	Yes	-
Cancel	New Request	-	-	Yes	-
Assign / change AML Officer	Any open status	-	-	Yes	-
Set / change Deadline	Any open status	-	Yes	Yes	-
Start Investigation	Accepted	-	Yes	Yes	-
No HIT	In Progress	-	Yes	Yes	-
HIT Detected	In Progress	-	Yes	Yes	-
Additional Documents	In Progress, No HIT	-	Yes	Yes	-
Approve	Additional Info Received, No HIT	-	Yes	Yes	-
Reject	Additional Info Received	-	Yes	Yes	-
Print AML KYC Report (PDF)	All except Draft	-	Yes	Yes	-
Open AML smart button on sale order	Any	-	Yes	Yes	-
AML Gate Override on sale order	While AML not completed	-	-	-	Yes

Enforced twice. The manager-only actions are hidden from the screen *and* re-checked in the server code. Attempting them another way returns "*Only AML Managers can accept / bypass / cancel requests*" or "*Only AML Managers can reassign the AML Officer*".

3. Instructions for the Salesperson

SALES Applies to anyone who raises and approves sale orders. No AML group needed.

3.1 Before you approve the order

1. Open the quotation and make sure the **Customer** has a valid **email address**. Without it the KYC form is never sent and no AML request is created at all.
2. Set **KYC Type**, shown as radio buttons just under the customer:
 - **Entity** – company, establishment, partnership, trust or any other legal person. Produces the full corporate KYC form including UBO, directors and shareholder registers.
 - **Individual** – a natural person. Produces the shorter personal KYC form.

This field is mandatory and drives the entire form the client receives, so take a moment to get it right.

3. Approve the order as usual.

3.2 What happens automatically

- An AML request is created in **Draft**.
- The document checklist for the chosen KYC type is pre-loaded (15 documents for an entity, 5 for an individual).
- The client is emailed a branded message with a secure **Complete KYC Form** button.
- An **AML** smart button appears on the order (visible to AML staff).

3.3 Tracking progress without AML access

You do not need AML rights to know where a client stands. The sale order carries a read-only **AML/KYC Completed** checkbox directly under the customer:

- **Ticked** – the most recent AML request is Approved or Bypassed. You may create the project and proceed with the engagement.
- **Unticked** – AML is still open, or was rejected or cancelled. Project creation is blocked.

You will also be emailed automatically whenever a request for one of your orders is **Bypassed** or **Cancelled**.

3.4 What to do when the client does not respond

1. Confirm the email address on the customer record is correct.
2. Ask an **AML Manager** to use **Resend KYC Form Email** on the request. Only they can do this.
3. If the engagement is dropped, cancel the sale order – the linked AML request is cancelled automatically and no further reminders are sent.

Do not ask for an override as a shortcut. The AML gate exists to keep the firm compliant. An override is an audited exception recorded against your order with the administrator's name, the reason and the timestamp; it is not a way to save time on a slow client.

4. Instructions for the AML Officer

OFFICER Group **AML User**. You see only the requests assigned to you.

4.1 Your daily starting point

Open **AML > AML Pipeline**. The kanban board groups your assigned requests by status, so your working columns are *Accepted*, *In Progress*, *HIT Detected* and *Additional Info Received*. Use the search panel filters (New Requests, In Progress, HIT Detected, Additional Info, No HIT, Approved, Bypassed, Cancelled) or group by Status, KYC Type or AML Officer to narrow the list.

If the board is empty, nothing has been assigned to you yet – that is expected, not a fault. Ask your AML Manager to assign the case.

4.2 Reviewing what the client submitted

Open the request and work through the tabs:

Tab	What to check
KYC – Entity (entity only)	Licence number and expiry, registered and business address, ownership complexity, high-risk jurisdiction answer, payment channels, cash-transaction band, top-5 suppliers and customers, sanctions declaration and all seven PEP questions.
KYC – Individual (individual only)	Identity document type, number, issuing country and expiry; addresses; source of funds; expected turnover; dual citizenship; high-net-worth flag; verification method (portal / UAE Pass, physical, video KYC).
UBO	Ultimate beneficial owner identity, nationality, dual citizenship, source of income, whether shares are held on behalf of another person, high-risk jurisdiction exposure and bank details.
Directors / Managers	Every director with position, nationality, ID/passport number, appointment date and status. Their uploaded ID documents are listed underneath with Preview and Download buttons.
Shareholders	Shareholder register with type, share class, number of shares and percentage holding. Confirm the percentages are complete and that anyone at or above the UBO threshold appears on the UBO tab.
Preliminary Information	The document checklist. Mandatory items are flagged. Use Preview to read a file in the browser and Download to save it; where several files were uploaded for one line, a pop-up lists them all.
HIT Document Requests	Appears once you have requested additional documents. Shows each requested document, your note to the client, the client's reply note, whether it has been submitted and the uploaded files.
Additional Information	Appears once the client has responded. Contains their free-text notes and the uploaded files.

The header also shows the client's electronic **signature**, the signatory's name and the exact date and time of signing.

4.3 Running the investigation

1. **Start Investigation** – click as soon as you genuinely begin. The timestamp is your audit evidence of turnaround time, so do not click it in advance.
2. Perform the screening outside Odoo per firm policy: UN / UAE Local Terrorist lists and other applicable sanctions lists, PEP databases and adverse media, for the client and for every UBO, director and shareholder disclosed.
3. Record the outcome:
 - **No HIT** – nothing found. A green ribbon appears; AML Managers and Management are emailed.
 - **HIT Detected** – a potential or confirmed match. A red ribbon appears and the additional-documents wizard opens immediately.
4. Attach or note your screening evidence in the chatter so the file is self-contained for a regulator or an external auditor.

4.4 Requesting additional documents

Use **Additional Documents** while the request is *In Progress*, or complete the wizard that opens automatically after **HIT Detected**. For each document add a line:

- **Document Name** (required) – exactly what you want, e.g. "Updated Trade Licence valid beyond 31/12/2026". Vague names cause a second round trip.
- **Description / Guidance** – the detail the client needs. It is shown both in the email and on the upload page.
- **Reference File** – an optional sample or blank template the client can download.

Click **Send Request to Client / Send Mail**. A fresh single-use upload link is generated and emailed. Sending a new request replaces any earlier request the client has not yet answered.

Request additional documents from *In Progress*, not from *No HIT*. Requesting them from the No HIT status moves the record straight to *Additional Info Received*, and the upload link the client receives will show "Form Expired". If you still need documents after marking No HIT, ask your AML Manager to handle it rather than sending a link the client cannot use.

4.5 Closing the case

- **Approve** – available from *Additional Info Received* and directly from *No HIT*. Marks the client cleared; the sale order's AML/KYC Completed flag is set and the engagement can proceed.
- **Reject** – available from *Additional Info Received*. Closes the request; the engagement stays blocked.
- **Print > AML KYC Report** – produces the full KYC PDF for the client file. Available in every status except Draft.

Housekeeping. You cannot delete an AML request or its lines, by design – the audit trail must stay intact. If something must be removed, ask an AML Manager.

5. Instructions for the AML Manager

MANAGER Group **AML Manager**. Full visibility of every request plus all AML Officer rights.

5.1 Triage - New AML Requests

AML > New AML Requests lists everything a client has submitted and nobody has actioned. Open each one, read the submission, then choose:

Action	Use when	Effect
Accept	AML due diligence is required – the normal case.	Status → Accepted. Ready for assignment and investigation.
Bypass (No AML Required)	The client is out of scope for AML/CFT customer due diligence under firm policy. Record why in the chatter before you click.	Status → Bypassed, request closed, AML/KYC counts as completed. Management and the salesperson are emailed.
Cancel	The submission is invalid, duplicated, or the engagement is not going ahead.	Status → Cancelled, request closed, AML/KYC does <i>not</i> count as completed. Management and the salesperson are emailed.

All three are available **only from New Request**. Once you have accepted a request you cannot bypass or cancel it from the buttons.

Bypass is a compliance decision, not an administrative one. It marks the client as AML-completed and unblocks the engagement without any screening. Use it only where firm policy genuinely exempts the client, and always leave the reason in the chatter – that note is the evidence a reviewer will look for.

5.2 Assigning the case

1. Open the request and set **AML Officer** in *Request Details*. The field is visible to managers only.
2. Saving sends the officer an assignment email and makes the record visible to them – until then, no officer can see it.
3. Adjust the **Deadline** if the automatic 24 hours from submission is not appropriate.
4. Reassign at any time by changing the field; the new officer is notified and the change is tracked in the chatter.

5.3 Oversight

- **AML > All Records** – every request in every status, including drafts where the client has not yet submitted. Use the Status / KYC Type / AML Officer grouping to see workload and ageing at a glance.
- **AML > AML Pipeline** – the kanban board across all officers.
- Overdue and at-risk records are highlighted in the list view.
- You receive the **every-two-days** digest of requests pending more than one day (Section 9).

5.4 Resending the KYC form

Resend KYC Form Email appears on requests in *Draft* or *New Request*. It re-sends the same secure link to the client's email address. Use it when the client says the message never arrived or was deleted; check the address on the customer record first.

5.5 Manager-only rights summary

- See and edit every AML request, whoever it is assigned to.
- Create and delete AML requests and their lines.
- Accept, Bypass and Cancel.
- Assign and reassign the AML Officer.
- Resend the KYC form email.
- Everything an AML Officer can do, on any record.

Reviewing before approval. Approve and Reject are open to the assigned officer as well as to you. If your policy requires a second pair of eyes before approval, make that a documented supervisory review – the system does not force a separate approver.

6. Instructions for the System Administrator

ADMIN Group `Settings` / `base.group_system`.

6.1 Granting access

1. *Settings > Users & Companies > Users*, open the user.
2. Under the **AML Automation** category choose **AML User** or **AML Manager**.
3. Leave it blank for everyone else – salespeople do *not* need an AML group to work with the AML gate on sale orders.

Never grant AML Manager simply to make a record visible. If an officer cannot see a case, the correct fix is for an AML Manager to assign it to them.

6.2 The AML gate override

When AML/KYC is not yet completed, an **AML Gate Override** tab appears on the sale order for administrators only.

1. Tick **Override AML Gate**.
2. Enter the **reason** – mandatory. Saving without one is refused.
3. The system stamps **Overridden By** and **Overridden On** and tracks the change in the order's chatter.

The tab disappears once AML/KYC is completed normally. Treat every override as an audited compliance exception and confirm it with the Compliance Officer first.

6.3 Scheduled jobs

Settings > Technical > Automation > Scheduled Actions

Scheduled action	Every	Sends
AML – Send Pending Records to AML Manager	2 days	Table of requests pending more than one day, to every active AML Manager.
AML – Send Pending Records to Management	1 week	The same table to the company's approver (Management).

Both are active by default and send nothing when there is nothing pending. "Pending" means status New Request, Accepted, In Progress, HIT Detected or Additional Info Received.

6.4 Configuration checklist

Setting	Why it matters
Outgoing mail server	Every step of this workflow is driven by email. If the server is not working, requests are still created and logged but clients never receive their form link. Check <i>Settings > Technical > Email > Emails</i> for messages stuck in Exception before blaming the module.
Web base URL <code>web.base.url</code>	Used to build the secure form links. If it is wrong, every link a client receives points to the wrong host.
Company logo	Appears on this manual, the KYC PDF, the client portal and every notification email.
Company approver (Management)	Recipient of the bypass/cancel/approve/reject notifications and the weekly digest. Without it those emails go only to AML Managers.
Customer email addresses	No email on the customer means no AML request is created when the order is approved.

6.5 Where the data lives

Model	Holds
<code>aml.request</code>	The request, all KYC/UBO answers, signature, status
<code>aml.request.director</code>	Directors / managers register
<code>aml.request.shareholder</code>	Shareholder register
<code>aml.request.document</code>	Preliminary information checklist and its files
<code>aml.hit.document</code>	Additional documents requested and received

7. Instructions for the Client - the KYC web form

CLIENT No login or password. Give this section to the client if they need help.

7.1 Getting in

The client receives an email from KGRN Chartered Accountants LLC with a **Complete KYC Form** button. The link is unique to them and needs no account. It stays open until the form is submitted; afterwards it shows *"Form Expired"*, which is normal and means the submission was received.

Progress is saved page by page, so the form can be closed and resumed from the same link.

7.2 The seven steps

#	Step	What to provide
1	Instructions	Read-only introduction explaining the purpose of the form and what to have ready before starting.
2	KYC Information	Entity: name, legal type, trading name, incorporation date and place, registration authority, licence number and expiry, registered and business addresses, industry and activities, source of wealth, ownership complexity, high-risk jurisdiction exposure, payment channels used, cash band, top five suppliers and customers, contact person, parent company, sanctions declaration and PEP questions. Individual: full name, gender, nationality, date and place of birth, ID type and number, issuing country and validity, addresses, contact details, proof-of-address type and date, verification method, purpose of the relationship, expected transactions and turnover, source of funds, dual citizenship, high-net-worth status and bank details.
3	UBO Details	The Ultimate Beneficial Owner: name, nationality, date and place of birth, dual citizenship, source of income, whether shares are held on behalf of someone else, addresses, contact details and bank details. (Entity forms only.)
4	Directors & Managers	One row per director, manager or secretary – name, position, nationality, ID/passport number, appointment date and status – plus their ID documents. State the date the register is accurate as of. (Entity forms only.)
5	Shareholders	One row per shareholder – name, nationality, individual or corporate, passport number, share class, number of shares, percentage held and date of entry – plus supporting documents. The percentages should account for the whole shareholding. (Entity forms only.)
6	Documents	Upload the checklist in Section 10. Mandatory items are marked; several files can be attached to one item, and a file can be removed and replaced before submitting.
7	Review & Sign	Check the summary, tick the declaration, type the signatory's name and designation, and sign – either drawn on screen or uploaded as an image. Then submit.

7.3 After submitting

- A confirmation page shows the AML reference number – keep it for any queries.
- The form link stops working; the compliance team now has the submission.
- If more information is needed, a second email arrives with an **Upload Additional Documents** link listing exactly what is required, with guidance notes and any sample file provided.
- On that page: upload against each item, add a note if helpful, then submit. That link is also single-use.

Before you start. Have scanned copies ready as PDF or image files, make sure proof-of-address documents are dated within the last three months, and check that identity documents are still valid.

8. Status reference

Status	Meaning	Set by	Next step
Draft	Request created, form sent, client has not submitted yet. Visible to AML Managers in All Records only.	System, on order approval	Wait; or Resend KYC Form Email
New Request	Client has completed and signed the form. AML reference and 24-hour deadline assigned.	Client	Manager: Accept / Bypass / Cancel
Accepted	AML due diligence is required and the case is ready to work.	AML Manager	Assign officer; Start Investigation
In Progress	Investigation under way; start date and time recorded.	AML Officer	No HIT / HIT Detected / Additional Documents
No HIT CLEAN	Screening found nothing against the client or its principals.	AML Officer	Approve
HIT Detected ALERT	A potential match was found; additional documents have been requested.	AML Officer	Wait for the client's upload
Additional Info Received	Client has supplied the requested documents.	Client	Approve / Reject
Approved CLOSED	AML/KYC cleared. The sale order shows AML/KYC Completed and a project can be created.	AML Manager / Officer	None – engagement proceeds
Rejected CLOSED	AML/KYC failed. The engagement stays blocked.	AML Manager / Officer	Escalate per firm policy
Bypassed CLOSED	Manager determined no AML check is required. Counts as AML/KYC completed.	AML Manager	None – engagement proceeds
Cancelled CLOSED	Request cancelled, or the sale order was cancelled. Does not count as completed.	AML Manager / System	None

Ribbons. The form view shows a coloured ribbon for No HIT Detected, HIT Detected, Approved, Rejected, Bypassed and Cancelled, so the outcome is visible without reading the status field.

9. Automated notifications and scheduled reports

Every notification is generated by the system – there is nothing to send by hand. All of them use the KGRN branded template with the company logo.

Trigger	Recipients	Contains
Sale order approved	Client	Secure KYC form link
Resend KYC Form Email (manual)	Client	The same secure link
Client submits the KYC form	All active AML Managers	Client, KYC type, deadline
AML Officer assigned or changed	The newly assigned officer	Client, KYC type, status, deadline
Request bypassed	Management + the order's salesperson	Client, sale order, status
Request cancelled	Management + the order's salesperson	Client, sale order, status
Additional documents requested	Client	List of documents, guidance notes, sample files, upload link
Client uploads additional documents	AML Managers + the assigned officer	Client, AML reference
Additional info requested from No HIT	AML Managers + Management	Client, new status
No HIT confirmed	AML Managers + Management	Client, status
Request approved	AML Managers + Management	Client, status
Request rejected	AML Managers + Management	Client, status
Every 2 days – pending more than 1 day	All active AML Managers	Table: reference, client, KYC type, status, deadline
Weekly – all pending requests	Management (company approver)	The same table

"Management" means the user set as the company's approver. If that is not configured, those notifications reach AML Managers only.

10. Document checklists

The checklist is loaded automatically from the KYC Type on the sale order. **M** marks a mandatory item.

10.1 Entity / corporate client - 15 items

#	M	Document
1	M	Latest copy of trade licence
2		Latest copy of all branch licences (if any)
3		Certificate of incorporation
4	M	UAE VAT & Corporate Tax registration certificate
5	M	Memorandum and Articles of Association
6		Certificate of incumbency / good standing – either one is accepted
7		Board resolution authorising the appointment of the auditor
8		Share certificates
9	M	Organisational / group chart up to the UBO
10	M	Lease agreement of the entity
11	M	Business profile / description of business activities
12		List of authorised signatories – use the Excel format provided; details must match the supporting documents
13		Family book issued by the UAE Government (UAE nationals)
14		Declaration – shareholders / managers residing together – only if a shareholder lives with family and has no separate proof of residence
15		Licence copies of related parties / parent companies (if applicable)

10.2 Individual client - 5 items

#	M	Document
1	M	Passport copy (front & back)
2	M	Proof of residence – utility bill, lease agreement or bank statement issued within the last 3 months showing the individual's address
3		Visa
4		Emirates ID
5		Profile information / résumé / CV with photograph

10.3 Also collected on the form

- Identity documents for **each director / manager** listed.
- Identity or incorporation documents for **each shareholder** listed.
- The signed declaration and the signatory's electronic signature.
- Anything additionally requested by the AML Officer during the investigation.

11. Troubleshooting

Symptom	Cause and resolution
No AML request was created when the order was approved	The customer has no email address. Add one and ask an AML Manager to resend, or re-approve the order.
Client says the KYC email never arrived	Check the spam folder and the address on the customer record, then use Resend KYC Form Email (AML Manager). If nothing at all is being delivered firm-wide, the outgoing mail server is the likely cause – see Section 6.4.
Client reports "Form Expired"	Normal after submission – the link is single use. If they have not submitted, they may be using an older email; resend the link.
An AML Officer cannot see a request	Officers only see records assigned to them. An AML Manager must set the AML Officer field. Do not fix this by granting AML Manager.
Accept / Bypass / Cancel buttons are missing	They exist only in <i>New Request</i> and only for AML Managers.
Approve is greyed out or missing	Approve is available from <i>Additional Info Received</i> and from <i>No HIT</i> only. From <i>In Progress</i> , record the screening outcome first.
Additional-documents link shows "Form Expired" for the client	The request was moved to <i>Additional Info Received</i> – this happens when additional documents are requested from the <i>No HIT</i> status. Request additional documents from <i>In Progress</i> instead (Section 4.4).
"Cannot create a project ... AML/KYC has not been marked Completed"	Working as designed. Complete AML (Approved or Bypassed), or have an administrator record an override with a reason.
"Only Administrators can override the AML/KYC completion gate"	The override is restricted to the Settings group. Raise it with IT and the Compliance Officer.
"Enter a reason before overriding the AML/KYC gate"	The reason field is mandatory. Fill it in and save again.
An officer cannot delete a request or a line	By design – the audit trail must stay intact. Ask an AML Manager.
Deadline looks wrong	It defaults to 24 hours after the client's submission. An AML Officer or Manager can change it on the request.
Pending-request digests are not arriving	Nothing may be pending, or the scheduled actions are inactive – check Section 6.3. The weekly digest also needs the company approver to be set.

12. Glossary and sign-off

Term	Meaning
AML	Anti-Money Laundering.
CFT	Combating the Financing of Terrorism.
KYC	Know Your Customer – the identification and verification of a client before and during the business relationship.
CDD	Customer Due Diligence.
UBO	Ultimate Beneficial Owner – the natural person who ultimately owns or controls the client.
PEP	Politically Exposed Person – someone entrusted with a prominent public function, and their close associates and family.
HIT	A potential or confirmed match of a name against a sanctions, PEP or adverse-media source.
No HIT	Screening completed with no match found.
Bypass	A manager's decision that AML due diligence is not required for this client. Closes the request as completed.
AML gate	The control that prevents a project being created for an engagement until AML/KYC is completed.
Chatter	The message and activity log at the bottom of every record – the audit trail.
Portal form	The secure, login-free web form sent to the client.

Acknowledgement

Each user with access to the AML application should confirm they have read and understood the sections relevant to their role.
